Even more sound: SV-122

The calls for simple equipment design and operation are getting ever louder. People are also starting to base their buying decisions increasingly on the sound rather than on the number of gimmicks the multichannel units offer.

After the launch of its 2-channel SV-123 receiver, Vincent is now introducing its SV-122 5.1 receiver. Based on Vincent's established tradition of delivering audio perfection, the company has developed a piece of equipment which combines excellent stereo characteristics with the possibilities offered by multichannel reproduction, and expansion. An RDS tuner has been integrated into the SV-122 to form the basis of a system.

The SV-122 is a thoroughbred 6-channel amplifier and therefore capable of driving a passive subwoofer. Discretely structured amplifier channels in conjunction with 12 Sanken transistors deliver top quality reproduction and amplification. The main unit contains a toroidal core transformer and delivers capacities of up to 33600 µF. This enables the unit to provide 60 Watts RMS at 4 Ohms.

The subwoofer delivers 80W.

It can decode the following formats: dts, Dolby Digital, Dolby Digital Prologic 2.

The SV-122 is the ideal stereo system with multichannel capability. In conjunction with Vincent loudspeakers it offers a highly cost-effective solution - performance which can be heard.

The SV-122 offers:

- Decoding technology for dts, Dolby Prologic II, Dolby Digital and PCM stereo
- RDS Tuner with 30 station memory
- Clear, high-contrast and dimmable LCD for displaying selected settings and operating status
- More than enough power for most types of loudspeakers:
50 x 60 Watt RMS / 4 Ohm. Possibility to run passive or active subwoofer
- Remote control of all functions
- Multifunction infinite-position knob on unit for easy operation
- Video input connections for up to 3 AV devices (3 x composite or 3 x S-Video)
- Audio input connections to add up to 6 further source units to the built-in tuner (1 x coaxial, 1 x optical, 3 high level inputs, 5.1 multichannel input)
- Video output connection - S-Video or composite
- Pre-amp output connections for stereo signal (PRE out) and subwoofer (SW)
- Audio output connection (stereo) for recording device (REC Out)

All user settings are made on the unit itself without the need for complex screen menus.

To achieve its excellent sound quality the unit is equipped as follows:

- 6 channel hifi power amp, consisting of discrete amplifier circuits based on 12 SANKEN® power transistors
- Low-interference and highly efficient toroidal core mains transformer
- 33600µF capacitors offer enough power reserves for clean, dynamic sound
- 192kHz/24 bit D/A converter
